12.2 Persistence and degradability

AEROBIC: Quinolinic acid, at a concn of 1 milli-Mole solution, underwent 100% biodegradation in 4 to 8 days when incubated in a 5 mL soil suspension consisting of 0.5% fertile garden soil, mineral salts, and maintained at pH 7(1). Quinolinic acid, starting concn of 54 ppm, was 100% degraded in 28 days using a soil inoculum at pH 7.0 and fortified with a basal salts medium(2). It was noted that 0.3% was sorbed by soil and less than 1% was lost due to volatilization(2). Using a Finecastle silt loam (Aeric Ochraqualfs) quinolinic acid, starting conc of 334 ppm, was 35.1, 96.2, 99.5 and 100% degraded after 1, 2, 4, and 8 days, respectively; samples were maintained at pH 6.7 and 25 deg C with 11.3% loss from sterile control after 7 days due to volatilization noted(3).

12.3 Bioaccumulative potential

An estimated BCF of 3 was calculated in fish for quinolinic acid(SRC), using a water solubility of 1.1×10^{-4} mg/L(1) and a regression-derived equation(2). According to a classification scheme(3), this BCF suggests the potential for bioconcentration in aquatic organisms is low(SRC).

12.4 Mobility in soil

The Koc of quinolinic acid is estimated as 26(SRC), using a water solubility of 1.1×10^{-4} mg/L(1) and a regression-derived equation(2). According to a classification scheme(3), this estimated Koc value suggests that quinolinic acid is expected to have very high mobility in soil. A pKa1 of 2.43(4) and a pKa2 of 5.48(5) indicates that this compound will primarily exist as a zwitterion in the environment and ions generally do not adsorb more strongly to soils containing organic carbon and clay than their neutral counterparts(6).

12.5 Other adverse effects

no data available

SECTION 13: Disposal considerations

13.1 Disposal methods

Product

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing.

Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

Contaminated packaging

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.
