4.3 Indication of immediate medical attention and special treatment needed, if necessary

Immediate first aid: Ensure that adequate decontamination has been carried out. If patient is not breathing, start artificial respiration, preferably with a demand valve resuscitator, bag-valve-mask device, or pocket mask, as trained. Perform CPR if necessary. Immediately flush contaminated eyes with gently flowing water. Do not induce vomiting. If vomiting occurs, lean patient forward or place on the left side (head-down position, if possible) to maintain an open airway and prevent aspiration. Keep patient quiet and maintain normal body temperature. Obtain medical attention. Poisons A and B

12.2 Persistence and degradability

Biological treatment of gray water containing an influent average avobenzone concentration of 3.5 ug/L reduced the average concentration to 0.48 ug/L under aerobic treatment, 1.27 ug/L under anaerobic treatment, and 0.2 ug/L with combined aerobic and anaerobic treatment(1).

12.3 Bioaccumulative potential

An estimated BCF of 113 was calculated for avobenzone in fish(SRC), using an estimated log Kow of 4.51(1) and a regression-derived equation(1). According to a classification scheme(2), this BCF suggests the potential for bioconcentration in aquatic organisms is high(SRC), provided the compound is not metabolized by the organism(SRC).

12.4 Mobility in soil

Using a structure estimation method based on molecular connectivity indices(1), the Koc of avobenzone can be estimated to be 1980(SRC). According to a classification scheme(2), this estimated Koc value suggests that avobenzone is expected to have low mobility in soil.

Product

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

Contaminated packaging

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.
