12.2 Persistence and degradability

no data available

12.3 Bioaccumulative potential

An estimated BCF value of 62 was calculated for 1-methoxy-4-methylbenzene(SRC), using an experimental log Kow of 2.66(1) and a recommended regression-derived equation(2). According to a recommended classification scheme(3), this BCF value suggests that 1-methoxy-4-methylbenzene will bioconcentrate moderately in aquatic organisms(SRC).

12.4 Mobility in soil

The Koc of 1-methoxy-4-methylbenzene is estimated as approximately 670(SRC), using an experimental log Kow of 2.66(1) and a regression-derived equation(2,SRC). According to a recommended classification scheme(3), this estimated Koc value suggests that 1-methoxy-4-methylbenzene has low mobility in soil(SRC).

12.5 Other adverse effects

no data available

SECTION 13: Disposal considerations

13.1 Disposal methods

Product

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

Contaminated packaging

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.
