- Toxicity to microorganisms: no data available

12.2 Persistence and degradability

Incubation of 1,200 and 750 mg/kg 2,3-dichloropropanol with soil samples from Texas and Mississippi that had not previously been exposed to chemical waste resulted in calculated biodegradation removal half-lives of 23.1 and 55.3 days, respectively(1).

12.3 Bioaccumulative potential

An estimated BCF of 3 was calculated for 2,3-dichloropropanol(SRC), using an estimated log Kow of 0.78(1,SRC) and a regression-derived equation(2). According to a classification scheme(3), this BCF suggests the potential for bioconcentration in aquatic organisms is low.

12.4 Mobility in soil

Using a structure estimation method based on molecular connectivity indices(1), the Koc for 2,3-dichloropropanol can be estimated to be about 4(SRC). According to a classification scheme(2), this estimated Koc value suggests that 2,3-dichloropropanol is expected to have very high mobility in soil.

SECTION 13: Disposal considerations

13.1 Disposal methods

Product

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

Contaminated packaging

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.
