SECTION 12: Ecological information

12.1 Toxicity

- Toxicity to daphnia and other aquatic invertebrates: EC50 - *Daphnia magna* - 1.8 - 3.2 mg/L - 48 h.
- Toxicity to algae: no data available
- Toxicity to microorganisms: EC50 - activated sludge - 130 mg/L - 3 h.

12.2 Persistence and degradability

Incubation of 3-chloro-2-methylphenylamine with the peroxidase of the soil fungus *Geotrichum candidum* yields the corresponding azobenzene derivative as a biotransformation product(1).

12.3 Bioaccumulative potential

Based upon an estimated log Kow of 2.58(1), the BCF for 3-chloro-2-methylphenylamine can be estimated to be 54 from a recommended regression-derived equation(2,3,4). A fish BCF of approximately 50 was measured using the Japanese MITI procedure for

bioaccumulation(3). The estimated and measured BCF values suggest that bioconcentration in aquatic organisms is not important environmentally(SRC).

12.4 Mobility in soil

Aromatic amines (such as chloroanilines and toluidines) have been observed to undergo rapid and reversible covalent bonding with humic materials in aqueous solution; the initial bonding reaction is followed by a slower and much less reversible reaction believed to represent the addition of the amine to quinoidal structure followed by oxidation of the product to give an amino-substituted quinone; these processes represent pathways by which aromatic amines may be converted to latent forms in the biosphere(1). In the absence of covalent bonding, a Koc value of approximately 235 can be estimated from 3-chloro-2-methylphenylamine's estimated log Kow of 2.58(2) using an appropriate regression-derived equation(3,SRC); this Koc value suggests medium soil mobility(4).

12.5 Other adverse effects

no data available

SECTION 13: Disposal considerations

13.1 Disposal methods

Product

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

Contaminated packaging

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.
