## Reference Material & Standard

|                    |                                                                   |                   |                                           |
|--------------------|-------------------------------------------------------------------|-------------------|-------------------------------------------|
| Product Name:      | (-)-Dibenzoyl-L-tartaric Acid Monohydrate                         | Catalogue Number: | CS369379                                  |
| Synonyms:          | N/A                                                               | Lot Number:       | 0905-RG-0077                              |
| CAS Number:        | 62708-56-9                                                        | Expiry Date:      | Sep 08, 2029                              |
| Molecular Formula: | C <sub>18</sub> H <sub>14</sub> O <sub>8</sub> · H <sub>2</sub> O | Storage:          | 2°C ~ 8°C Protected from light and Sealed |
| Molecular Weight:  | 358.30 18.02                                                      |                   |                                           |

Warning:

Chemical Structure:

| Test Items                 | Method            | Results     |
|----------------------------|-------------------|-------------|
| Appearance                 | Visual inspection | White Solid |
| Identification             | LCMS&HNMR         | Confirmed   |
| Purity                     | HPLC              | 99.860%     |
| Loss On Drying             | TGA               | 4.8293%     |
| Loss On Drying(Free Water) |                   | 0.0408%     |
| Assay                      |                   | 99.8%       |
| Uncertainty                |                   | ±0.1%       |

## Comment:

1. The content of crystal water is 4.7885%.

2. The calculation of the mass balance method follows the formula (calculated on the non-dried basis):

Assay (%) = (100% - Loss On Drying(Free Water)) \* Purity HPLC (%) / 100%

Loss On Drying(Free Water) is considered as absolute effect, HPLC purity is considered as relative effect.

3. The uncertainty values are the expanded uncertainty and represent an estimated standard deviation equal to the positive square root of the total variation of the uncertainty of components. A normal distribution is assumed and a coverage factor of K=2 is chosen using approximately a 95% confidence level.
